

Helpacrom 3

1. Introduction:

Mixture of organic compounds with reducing activity.

2. Description:

Mixture of organic compounds with reducing activity.

3. Composition:

Appearance:	Dense liquid
Color:	Bluish white
Character:	Anionic
pH (10%):	7.0±0.5

4. Properties:

The product is an emulsion, and as such, may be subject to small variations in color and consistency. These variations have no influence on the application or technical properties. Helpacrom 3 reduces the risk of Chromium VI formation in the leather, maintaining its effect for long periods. It has uniform and deep penetration through the entire skin.

5. Minimum storage capability:

The product may be stored with its container tightly closed in a well-ventilated place at a temperature ranging from +5°C to +35°C. Sealed containers have a service life of 6 months.

6. Application:

It is recommended to apply it in the main fatliquoring process in quantities that range between 0.5% and 0.8% of the weight of the shaved leather. The product will be applied in this part of the process and its emulsion and dilution will be carried out as usual.
