

# Soaquin H 50

## 1. Description:

Auxiliary product for leather soaking.

## 2. Presentation:

Damping agent.

## 3. Composition:

Surfactant agents mix.

Appearance:	Liquid.
Nature:	Anionic.
pH value: (1:10):	8,0 +/- 1
Colour:	Colourless.

## 4. Properties:

Surfactant agent indicated to reduce salty leathers' soaking time and to get their optimal wetting back level by reducing the surface tension over the water to which the product is added. In the same way, we recommend this product for wetting back dry leathers, either rough, or wet blue or crust treated. It can be mixed with water in any needed proportion.

## 5. Minimum storage suitability:

The product can be kept well closed inside its own container, in a well ventilated place at a temperature moving between +5°C and +35°C. It lasts for 12 months kept in its own sealed container.

## 6. Application:

The quantities to be used will depend on the condition of the leathers to be processed; an approximate addition moving around 0,2 to 0,5% over salty leathers' weight can be estimated. In the cases of dry or crust leather we could consider quantities moving around 2 grammes per litre.

## 7. Safety:

When handling this product the instructions set out in the safety data leaflet must be observed. The relevant safety and precautionary measures for hygiene in the workplace must also be followed when working with chemical products.

## 8. Observations:

The instructions given in this publication are based on the current stand of our knowledge and experience. This does not presuppose any judicial guarantee concerning certain properties nor their suitability for any application in particular. Given the many influences that may occur during the handling and use of our products, the persons handling or transforming them are not exempt from carrying out their own controls or tests. All those receiving our products will be responsible for observing all existing patent rights as well as all current laws and regulations.
