

Soaqin PH

1. Description:

pH leveller agent for damping procedure.

2. Chemical nature:

Salts combination with pH adjusting properties.

3. Characteristical features:

Appearance:	Powder
Colour:	White
pH (1:10):	9,5-10,5
Active matter:	100%

4. Properties:

Soaqin PH is a prduct that helps to stabilize the pH during leathers' damping procedure, no matter how much natural fat the leather contains. Soaqin PH keeps the pH in the damping bath between 9,5-10,0 all along the damping procedure, which avoids unexpected pH results and its potential consequences.

5. Storage capacity:

The product may be stored with its container tightly closed in a well-ventilated place at a temperature ranging from +2°C to +35°C. Sealed containers have a service life of 12 months.

6. Application:

In principle, Soaqin PH is applied at the beginning of the main soaking prodecure, in a quantity that has to be around 1% of the leather's salted weight. It is advisable setting the correct quantity according to the type of leather we are working on.

7. Safety:

When handling this product the instructions set out in the safety data leaflet must be observed. The relevant safety and precautionary measures for hygiene in the workplace must also be followed when working with chemical products.

8. Observations:

The instructions given in this publication are based on the current stand of our knowledge and experience. This does not presuppose any judicial guarantee concerning certain properties nor their suitability for any application in particular. Given the many influences that may occur during the handling and use of our products, the persons handling or transforming them are not exempt from carrying out their own controls or tests. All those receiving our products will be responsible for observing all existing patent rights as well as all current laws and regulations.
