

1. Description:

Auxiliary product for leather finishing.

2. Presentation:

Synthetic wax, purposed to get leather's heavy darkening effects (pull-up).

3. Composition:

Synthetic wax on a solvent basis.

Appearance:	Solid.
Melting point:	50°C
Solids content:	99,5 +/-0,5
Colour:	Yellowish.

4. Properties:

CW-0468 Wax darkens the leather a lot and provides with a remarkable pull-up effect in the production. This wax darkens but doesn't dirty the original colour of the base, either the crust, or the top dyed ones.

5. Minimum storage capacity:

The product can be stored in its well closed container in a well ventilated place. In its sealed container it lasts for 12 months.

6. Application:

As this wax stays solid at room temperature, it has to be molten previously to its use, with a roller machine (melting temperature 50°C), and applied in the machine with the rollers previously warmed. This wax can be mixed with oils in a solvent basis, in order to get darker, softer effects, or alter wax's touch.

7. Safety:

When handling this product the instructions set out in the safety data leaflet must be observed. The relevant safety and precautionary measures for hygiene in the workplace must also be followed when working with chemical products.

8. Observations:

The instructions given in this publication are based on the current stand of our knowledge and experience. This does not presuppose any judicial guarantee concerning certain properties nor their suitability for any application in particular. Given the many influences that may occur during the handling and use of our products, the persons handling or transforming them are not exempt from carrying out their own controls or tests. All those receiving our products will be responsible for observing all existing patent rights as well as all current laws and regulations.
