

1. Introduction:

Auxiliary product for leather finishing.

2. Presentation:

For finishings of full grain hides and doped grounds with natural leather appearance and touch.

3. Composition:

Micro-binding agent based on polyurethane and polyacrylate in aqueous dispersion.

Appearance:	liquid.
Solids content:	15 +/- 1
pH value(1:10):	9,0 +/- 0,5

4. Properties:

Fine particle dispersion and medium hardness. The product is compatible with water miscible solvents. Applied over the leather it gives a slight film, very elastic and with good adherence. The product has an excellent extensibility in its application and damps well its basis. Excellent binding agent for pigments and dyeing agents with high penetration power, due to its emulsifying system that avoids a pigmentation excess on the leather surface, without recharging the grain.

5. Minimum storage capacity:

The product can be stored in its well closed container, in a well ventilated place at temperatures between +5° and +35°C. In its sealed container it lasts 12 months.

6. Application:

Especially suitable to obtain strongly pigmented grounds over full grain hides with natural leather appearance and touch.

7. Safety:

When handling this product the instructions set out in the safety data leaflet must be observed. The relevant safety and precautionary measures for hygiene in the workplace must also be followed when working with chemical products.

8. Observations:

The instructions given in this publication are based on the current stand of our knowledge and experience. This does not presuppose any judicial guarantee concerning certain properties nor their suitability for any application in particular. Given the many influences that may occur during the handling and use of our products, the persons handling or transforming them are not exempt from carrying out their own controls or tests. All those receiving our products will be responsible for observing all existing patent rights as well as all current laws and regulations.
