

Neuqin WF

1. Description:

Special features neutralizing agent.

2. Chemical nature:

Organic and non-organic salts based neutralizing agent.

3. Characteristical features:

Appearance:	Powder.
Colour:	Whitish
pH:	7,5-8,5
Active material:	100%
Charge:	Anionic

4. Properties:

Our neutralizing purposed product Neuqin WF is a balanced mix of neutralizing agents that provide certain features that allow an homogeneous neutralization all over the leather, not only by replacing the free strong acids present on leather for weaker ones, but also, Neuqin WF manages to neutralize leather's free chrome that damages regularity for waterproof leathers.

5. Storage capacity:

The product may be stored with its container tightly closed in a well-ventilated place at a temperature ranging from +2°C to +35°C. Sealed containers have a service life of 12 months.

6. Application:

Given the variables taking part during the procedure, final tanning pH value, leathers' age, item to be manufactured, etc, a certain quantity can not be exactly indicated. The quantity must be adjusted at the tannery. Normally between 2% and 4% is applied as an only neutralizing agent, over shaved weight.

7. Safety:

When handling this product the instructions set out in the safety data leaflet must be observed. The relevant safety and precautionary measures for hygiene in the workplace must also be followed when working with chemical products.

8. Observations:
