

1. Introduction:

CW-0473 Wax is a water-miscible emulsion of waxes and acrylic copolymers that improves the touch of leather without impairing fastness.

2. Description:

Acrylic and fluorocarbon copolymers emulsion.

3. Composition:

Appearance:	Liquid.
Character:	Non-ionic.
Solid content:	10 ± 1
PH value (1:10):	9-10
Color:	White.

4. Properties:

CW-0473 Wax is a product with water-repellent properties that notably improves the surface protection of aniline leathers, finished leathers, as well as nubuck and suede. Applied on leather, it gives a very persistent soft and pleasant touch.

5. Minimum storage capability:

The product may be stored with its container tightly closed in a well-ventilated place at a temperature ranging from +5°C to +35°C. Sealed containers have a service life of 6 months.

6. Application:

CW-0473 is applied by spray, diluted in water at the rate of one part wax and two or three parts water. It can also be added to aqueous finishes to improve their touch and water repellency.

7. Safety:

When handling this product the instructions set out in the safety data leaflet must be observed. The relevant safety and precautionary measures for hygiene in the workplace must also be followed when working with chemical products.

8. Observations:

The instructions given in this publication are based on the current stand of our knowledge and experience. This does not presuppose any judicial guarantee concerning certain properties nor their suitability for any application in particular. Given the many influences that may occur during the handling and use of our products, the persons handling or transforming them are not exempt from carrying out their own controls or tests. All those receiving our products will be responsible for observing all existing patent rights as well as all current laws and regulations.
