

1. Introduction:

Polymeric based fatliquoring and retanning agent recommended for waterproof and washable leathers.

2. Description:

Filling and fatliquoring polymer.

3. Composition:

Appearance:	Fluid liquid.
Character:	Anionic.
Solid content:	66.0 ± 1.0
pH (1:10):	6.50 ± 0.50

4. Properties:

Retanning and fatliquoring copolymer that confers to the leather a high degree of water repellency. Nice touch and very good fullness. To achieve optimal levels of waterproofing, it is necessary to fix it with metal salts of chromium, aluminum or zirconium, the desired degree of softness will be proportional to the amount of product added. If it is used for washable articles, it will not lose its touch or its natural appearance after several washes. Presents high light and heat fastnesses.

5. Minimum storage capability:

The product may be stored with its container tightly closed in a well-ventilated place at a temperature ranging from +5°C to +35°C. Sealed containers have a service life of 6 months.

6. Application:

It can be used as a single fatliquor in baths of 45-55°C or combined with other waterproofing products and always on homogeneously neutralized leathers at pH's higher than 4.8/5.0.

7. Safety:

When handling this product the instructions set out in the safety data leaflet must be observed. The relevant safety and precautionary measures for hygiene in the workplace must also be followed when working with chemical products.

8. Observations:

The instructions given in this publication are based on the current stand of our knowledge and experience. This does not presuppose any judicial guarantee concerning certain properties nor their suitability for any application in particular. Given the many influences that may occur during the handling and use of our products, the persons handling or transforming them are not exempt from carrying out their own controls or tests. All those receiving our products will be responsible for observing all existing patent rights as well as all current laws and regulations.
