

Tanqin BDV

1. Introduction:

Product for leather retanning.

2. Presentation:

Derivative product of the phenol-sulphonic acid condensation.

3. Composition:

Appearance:	powder.
Nature:	anionic.
Solids content:	95±1
PH Value (1:10):	6,5±1
Colour:	white.

4. Properties:

Product with very low astringency, which permits to give sponginess and softness. Its features, in the moment it enters in contact with the leather, are giving a soft touch and a very good hand. For split leather it helps to hide the vein on the surface of the leather.

5. Minimum storage capacity:

The product can be stored en its well closed container in a well ventilated place at temperatures between +5° and +35°C. In its sealed container it lasts 12 months.

6. Application:

This product is recommended to be used first of all for retanning, although it can also be used during the fatliquoring. In any case, it is recommended for standard procedures to add between 2 and 6% of the shaved weight.

7. Safety:

When handling this product the instructions set out in the safety data leaflet must be observed. The relevant safety and precautionary measures for hygiene in the workplace must also be followed when working with chemical products.

8. Observations:

The instructions given in this publication are based on the current stand of our knowledge and experience. This does not presuppose any judicial guarantee concerning certain properties nor their suitability for any application in particular. Given the many influences that may occur during the handling and use of our products, the persons handling or transforming them are not exempt from carrying out their own controls or tests. All those receiving our products will be responsible for observing all existing patent rights as well as all current laws and regulations.
